When life
throws you a
CURVE
here's how to stay on track

Soul is packed with advanced technologies to help combat slipping or skidding in a variety of challenging situations.[†] Here's how each one works to help you stay in control.

TO ENHANCE CONTROL

ELECTRONIC STABILITY CONTROL (ESC)

In difficult driving situations, ESC is designed to help control the engine and brakes for improved directional stability.

TO KEEP YOU ON COURSE

VEHICLE STABILITY MANAGEMENT (VSM)

VSM is designed to intervene to help enhance stability and steering responses when driving on some slippery roads.

TO HELP PREVENT SLIPPING

TRACTION CONTROL SYSTEM (TCS)

When TCS senses wheelspin during acceleration, it uses a combination of engine power and brake force to help transfer power to the wheel that has more traction.

FOR HELP ON AN INCLINE

HILL-START ASSIST CONTROL (HAC)

HAC can help prevent the vehicle from rolling backward when starting on an incline by holding the brakes for approximately 2 seconds.

WHEN YOU HIT THE BRAKES

ANTI-LOCK BRAKING SYSTEM (ABS)

The cornerstone of active safety features, ABS helps provide greater control when stopping in difficult conditions like wet or slippery roads.

[†]No system, no matter how advanced, can compensate for all driver errors, driving conditions, accidents, and/or injury. Always drive responsibly.
