

CHEVY VANS

Chevy Vans

THE NEW FAMILY TRADITION.

Families have counted on Chevy vans for more than 35 years for vacation travel. Now Chevrolet is continuing this tradition with the best full-size van in its history.

Introducing the 2003 Chevy Express. It's the only full-size van to offer a swing-out driver-side passenger door and the first and only full-size van with available All-Wheel-Drive.*

And for the most capable midsize van,† there's the Chevy Astro with standard seating for eight and more cargo space than Ford Excursion (with second and third row seats removed).

Plus, Astro has available All-Wheel-Drive. For the ultimate in family travel, Express and Astro are designed with a strong foundation, making them ideal for an upfit from an independent conversion company.

Of course, whether you choose Express or Astro, you're getting a van from the family of Chevy Trucks — the most dependable, longest-lasting trucks on the road.**

*NOTE: Unless otherwise noted, all claims in this brochure are based on 2002 competitive information and exclude other GM vehicles. †Based on standard passenger, maximum trailering and maximum cargo capacity. **Dependability based on longevity: 1981–July 2001 full-line light-duty truck company registrations. Excludes other GM divisions.

CHEVY VANS  **LIKE A ROCK**

NOTE: This catalog shows many vehicles that have been altered or upfitted with equipment, bodies or components supplied to General Motors by independent suppliers. Chevy Express Engineering

SETTING THE STANDARD.

Start out with the only full-length boxed frame in the class. Include the most standard horsepower of any engine lineup in its class, the latest generation of available Vortec V8 engines and new four-wheel ventilated disc brakes with standard ABS. Now you have the strength of a Chevy Truck. Add all this to the fact that the Chevy Express is the first and only full-size van to offer an All-Wheel-Drive model, the only full-size van with available driver-side 60/40 swing-out doors, and you have the engineering standard for full-size vans.

FOUR-WHEEL ABS DISC BRAKES

Chevy Express features a new four-wheel ventilated disc brake system with ABS standard on all models. The ABS system helps the driver maintain steering control by reducing wheel lockup while braking hard on most slippery surfaces. The new brake system also includes Dynamic Rear Proportioning (DRP), which recognizes rear-brake lockup and regulates the pressure applied to the brakes.

FULL-LENGTH BOXED FRAME

Chevy Express has the only full-length boxed frame in its class, helping to enhance its Chevy Truck strength.

LARGE-CAPACITY FUEL TANK

The Chevy Express has a composite 31-gallon (approx.) fuel tank, so you can go a long way between your fill-ups.

ALL-WHEEL-DRIVE

The new, available All-Wheel-Drive is a full-time, single-speed system that normally operates in a 35/65 (front/rear) torque split mode. Once rear-wheel slippage is sensed, torque is automatically transferred to the front tires for added traction when needed. The 2003 Chevy Express is the first and only full-size van to offer an All-Wheel-Drive model.

100,000-MILE MAINTENANCE FEATURES

Every Express Vortec engine can travel up to 100,000 miles before the first scheduled replacement of the platinum-tip spark plugs. In addition, the serpentine belt and coolant for all Vortec engines do not require replacement for up to 150,000 miles or five years, whichever comes first.*

*Maintenance needs vary with different uses and driving conditions. See the Owner's Manual for more information.

VORTEC POWER

Chevy Express offers the most standard horsepower of any engine lineup in its class. Depending on the model, choose from three standard Vortec engines, ranging from the Vortec 4300 V6 with 200 horsepower on most 1500 models, to the Vortec 6000 V8 with 300 horsepower now standard on 2500 and 3500 models. And every Vortec engine is combined with a standard Hydra-Matic four-speed automatic overdrive transmission with Tow/Haul mode.

RACK-AND-PINION POWER STEERING

Express Vans under 8600-lbs. GVWR* feature standard power-assisted rack-and-pinion steering for precise steering response. Express models at or above 8600-lbs. GVWR* feature a heavy-duty power-assisted recirculating ball steering system.

*Gross Vehicle Weight Rating. When properly equipped; includes weight of vehicle, passengers, cargo and equipment.

TWO-STAGE MULTILEAF REAR SPRINGS

Two-stage multileaf rear springs engage as the load weight increases, providing additional support without reducing the ride quality.

BATTERY-RUNDOWN PROTECTION

Should you forget, the battery-rundown protection feature, new to Express, will automatically turn off the lights 10 minutes after the ignition has been switched off.

INDEPENDENT FRONT SUSPENSION

An independent front suspension contributes to the precise control and comfortable ride of the Chevy Express. Rear-wheel-drive models utilize coil springs, while All-Wheel-Drive-equipped models feature torsion bars.

16-INCH WHEELS AND TIRES

Every Chevy Express has new standard 16-inch wheels and tires.

1 Maximum trailer weight ratings are calculated assuming a base vehicle, except for the option(s) necessary to achieve the rating, plus driver. The weight of any alteration or conversion, as well as any other optional equipment, passengers and cargo will reduce the maximum trailer weight your vehicle can tow. See your Chevy dealer for additional details. **2** Gross Combination Weight Rating. **3** Having a conversion upfit installed by an independent supplier will reduce the maximum trailer weight rating. Consult with the independent upfitter to obtain the final maximum trailer weight rating.

NOTE: Trailer tongue weight should be 10 to 15 percent (up to 1,000 pounds for Express and 750 pounds for Astro) of total loaded trailer weight. Addition of trailer tongue weight cannot cause vehicle weights to exceed Rear Gross Axle Weight Rating (RGAWR) or Gross Vehicle Weight Rating (GVWR). These ratings can be found on the certification label located on the driver door or door frame. ■ Base cooling system includes all content required to attain maximum trailer rating. No optional cooling equipment available. ■ Optional Z82 Heavy-Duty Trailering Special Equipment Package includes a weight-distributing hitch platform and an eight-wire trailer wiring harness.

◀ TOW/HAUL MODE

When engaged, Tow/Haul mode enhances trailering by reprogramming the automatic transmission shift schedule to help transport heavy loads. Express Tow/Haul switch shown.

TRAILERING BASICS

Towing a trailer involves all major vehicle systems of your Chevy Truck, including powertrain, steering, suspension and brake systems. Easy and safe trailering requires a properly equipped vehicle, additional trailering equipment and an appropriate trailer. It also requires loading both the vehicle and trailer properly, using safe driving techniques, meeting regional legal requirements and following break-in and maintenance schedules. You are responsible for being sure you have the appropriate equipment and hitch for your specific trailering situation. If you plan to tow a trailer, consult your Owner's Manual and speak to a trailering expert at your Chevrolet dealership or visit our web site at chevy.com. The charts to the left will assist in determining how to best equip your Chevy Truck for trailering.

To help you understand the charts, consider these trailering factors:

TORQUE: Indicates the strength of the engine. Low-end torque reflects how much force is generated to get your vehicle moving.

HORSEPOWER: Indicates how much work the engine does at a certain engine speed. At mid to high engine rpm, it's what keeps you moving at highway speeds.

AXLE RATIO: Along with your vehicle's transmission gears, a higher rear axle ratio contributes to how much available torque and horsepower (mechanical leverage) can be applied to the drive wheels for launch and uphill performance. Higher rear axle ratios, however, sacrifice fuel economy when not trailering.

BALL HITCH TRAILERING: There are two types of ball hitches. A weight-carrying hitch consists of a ball and coupler with no means to distribute the hitch weight. It is used primarily for lightweight trailers. Heavier trailers, however, require a

weight-distributing hitch which uses spring bars to transfer some of the hitch weight forward onto the tow vehicle's front axle and rearward onto the trailer's axle(s).

RGAWR and GVWR: The addition of trailer hitch weight cannot cause vehicle weights to exceed Rear Gross Axle Weight Rating (RGAWR) or Gross Vehicle Weight Rating (GVWR). These ratings can be found on the certification label located on the driver door or door frame.

GCWR: The Gross Combination Weight Rating (GCWR) is the total allowable weight of the completely loaded vehicle and trailer including any passengers, cargo, equipment and conversion. A properly equipped tow vehicle and trailer at the maximum GCWR should be able to accelerate and merge with traffic, climb typical interstate grades at highway speeds, handle the combination on most road surfaces, and stop adequately within a reasonable distance. The GCWR for your vehicle should not be exceeded.

TRAILERING CAUTIONS

NOTE: Please read the following trailering cautions/safety information before trailering with your new vehicle.

NOTE: The safety steps described here are by no means the only precautions to be taken when trailering. See the Owner's Manual for the Chevy Truck of your choice for additional guidelines and trailering tips.

■ If you don't use the correct equipment and drive properly, you can lose control of your vehicle when you pull a trailer. For example, if the trailer is too heavy, your vehicle brakes may be less effective. You and your passengers could be seriously injured. Pull a trailer only after taking the following steps:

TRAILER BRAKES

If your trailer weighs more than 1,000 lbs. loaded, then it must have its own adequate brakes. Be sure to read and follow the instructions for the trailer brake controller so that it is installed, adjusted and maintained properly.

■ Don't tap into your vehicle's brake system if the trailer's brake system will use more than 0.02 cu. in. of fluid from your vehicle's master cylinder. If it does, neither braking system will work well. You could even lose your vehicle's brakes.

■ The trailer brake parts must be able to take 3,000 psi of pressure. If not, the trailer brake system must not be used with your vehicle. If everything checks out thus far, have a qualified individual make the brake fluid tap at the port on the master cylinder that sends fluid to the rear brakes. Don't use copper tubing because it will bend and ultimately break. Use only double-walled steel brake tubing.

HITCHES

It's important to have the correct hitch equipment. Crosswinds, large trucks going by and rough roads are just a few of the reasons why you'll need the right hitch. Here are some rules to follow:

■ If you'll be towing a trailer that, when loaded, will weigh more than 3,500 lbs., be sure to use a frame-mounted, weight-distributing hitch and sway control of the proper size. The equipment is very important for proper vehicle loading and good handling when you're driving.

■ If you have to make any holes in the body of your vehicle to install a trailer hitch, be sure to seal the holes if you ever remove the hitch. If they're not sealed, dirt, water and deadly carbon monoxide from the exhaust can get into your vehicle.
