

The New Hudson

NOW... YOU'RE FACE TO FACE WITH TOMORROW

Where the motor car of tomorrow is being built now!

Just before your first look at the gorgeous new Hudson in this brochure, it's worthwhile knowing that this different kind of automobile is built in a factory system that produces its own Monobilt body-and-frames, motors, axles, clutches, transmissions, controls and other major assemblies.

The above composite view, painted from aerial photos, shows Hudson's more than

three million square feet of factory space. This is where 16 million dollars have been invested to install large quantities of new production equipment and to develop entirely new production techniques to bring you this new kind of car.

Upper right, building (A), Gear, axle manufacturing, assembly; (B), Service parts assembly, boxing, shipping, ex-

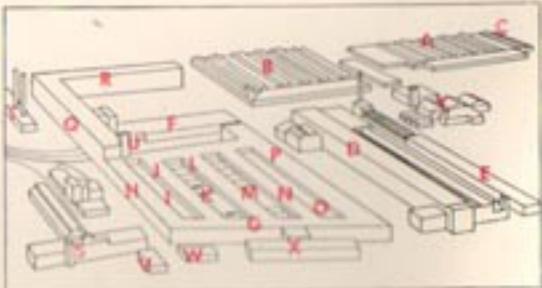

port shipping; (C), Metal heat treating.

Lower right, building (D), Monobilt body-and-frame, fender and sheet metal manufacturing, finishing, painting; (E), Medical center.

Center group, building (F), Assembly and production line for rear axle, springs, shock absorbers, stabilizer bar, propeller shafts, gas tank, muffler,

brake lines; (G), Super-Six and Super-Eight engine manufacturing, assembly, testing; (H through P), Machine shops, metal heat treating; (J, L, N), Cushion, upholstery fabrication; (P—first and second floors), Manufacturing, assembly of clutches, transmissions; (Q), Production line for front end, including wheels, tires, engine, radiator core, grille, hood; (R), Final inspection, tune up, material storage.

Lower left, (S), Research, Experimental Laboratories, Engineering Buildings; (T), Power plants; (U), Direct rail receiving, shipping; (V), Personnel building; (W), Medical Center, Hospital; (X), General and Executive Offices; upper right, (Y), Hudson Motors, Ltd., London, England.

Hudson presents a motor-car triumph!

THERE is something new, something exciting going on in the motor-car world!

What's it all about?

This brochure takes you behind the scenes; shows you how you can choose your next car with certainty that you're getting the wonderful new motoring advantages you've been told were years away; how you can avoid investment in a transition or compromise model that may soon leave you forlornly out of place in a bright new motor world.

How did it happen?

Automotive engineers and the public alike are aware that a low-built motor car opens up opportunities for beautiful, long sweeping body lines. Most people are also aware of the more important advantage—the fact that a truly low center of gravity provides unusual stability, a gratifying ability to "hug" the road under all conditions.

So you've seen cars with floors slanted, door entrances obstructed by seats; you've seen tops lowered until inside

headroom and comfort threaten to become no more than fond memories and with all this in mind, Hudson felt that the time had arrived for a fundamental change in automobile design.

So Hudson engineers were told, "The public wants something new . . . a motor car that is low-built and gorgeous, a car that has a *truly* low center of gravity, yet maintains road clearance, and inside headroom and comfort! Design and produce a new Hudson; go 'all-out,' forget compromise and face-lifting!"

This challenge was sweet music to the Hudson group for, as you've seen on the facing page, Hudson is a marvelously self-contained unit, a fast-moving, flexible organization with vast design and production resources, all backed by mature automotive experience.

And here we present the answer to this bold challenge, a motor-car triumph resulting from a 16 million dollar investment, and over a million miles of testing and checking! Turn the left-hand edge of this page and you'll agree . . .

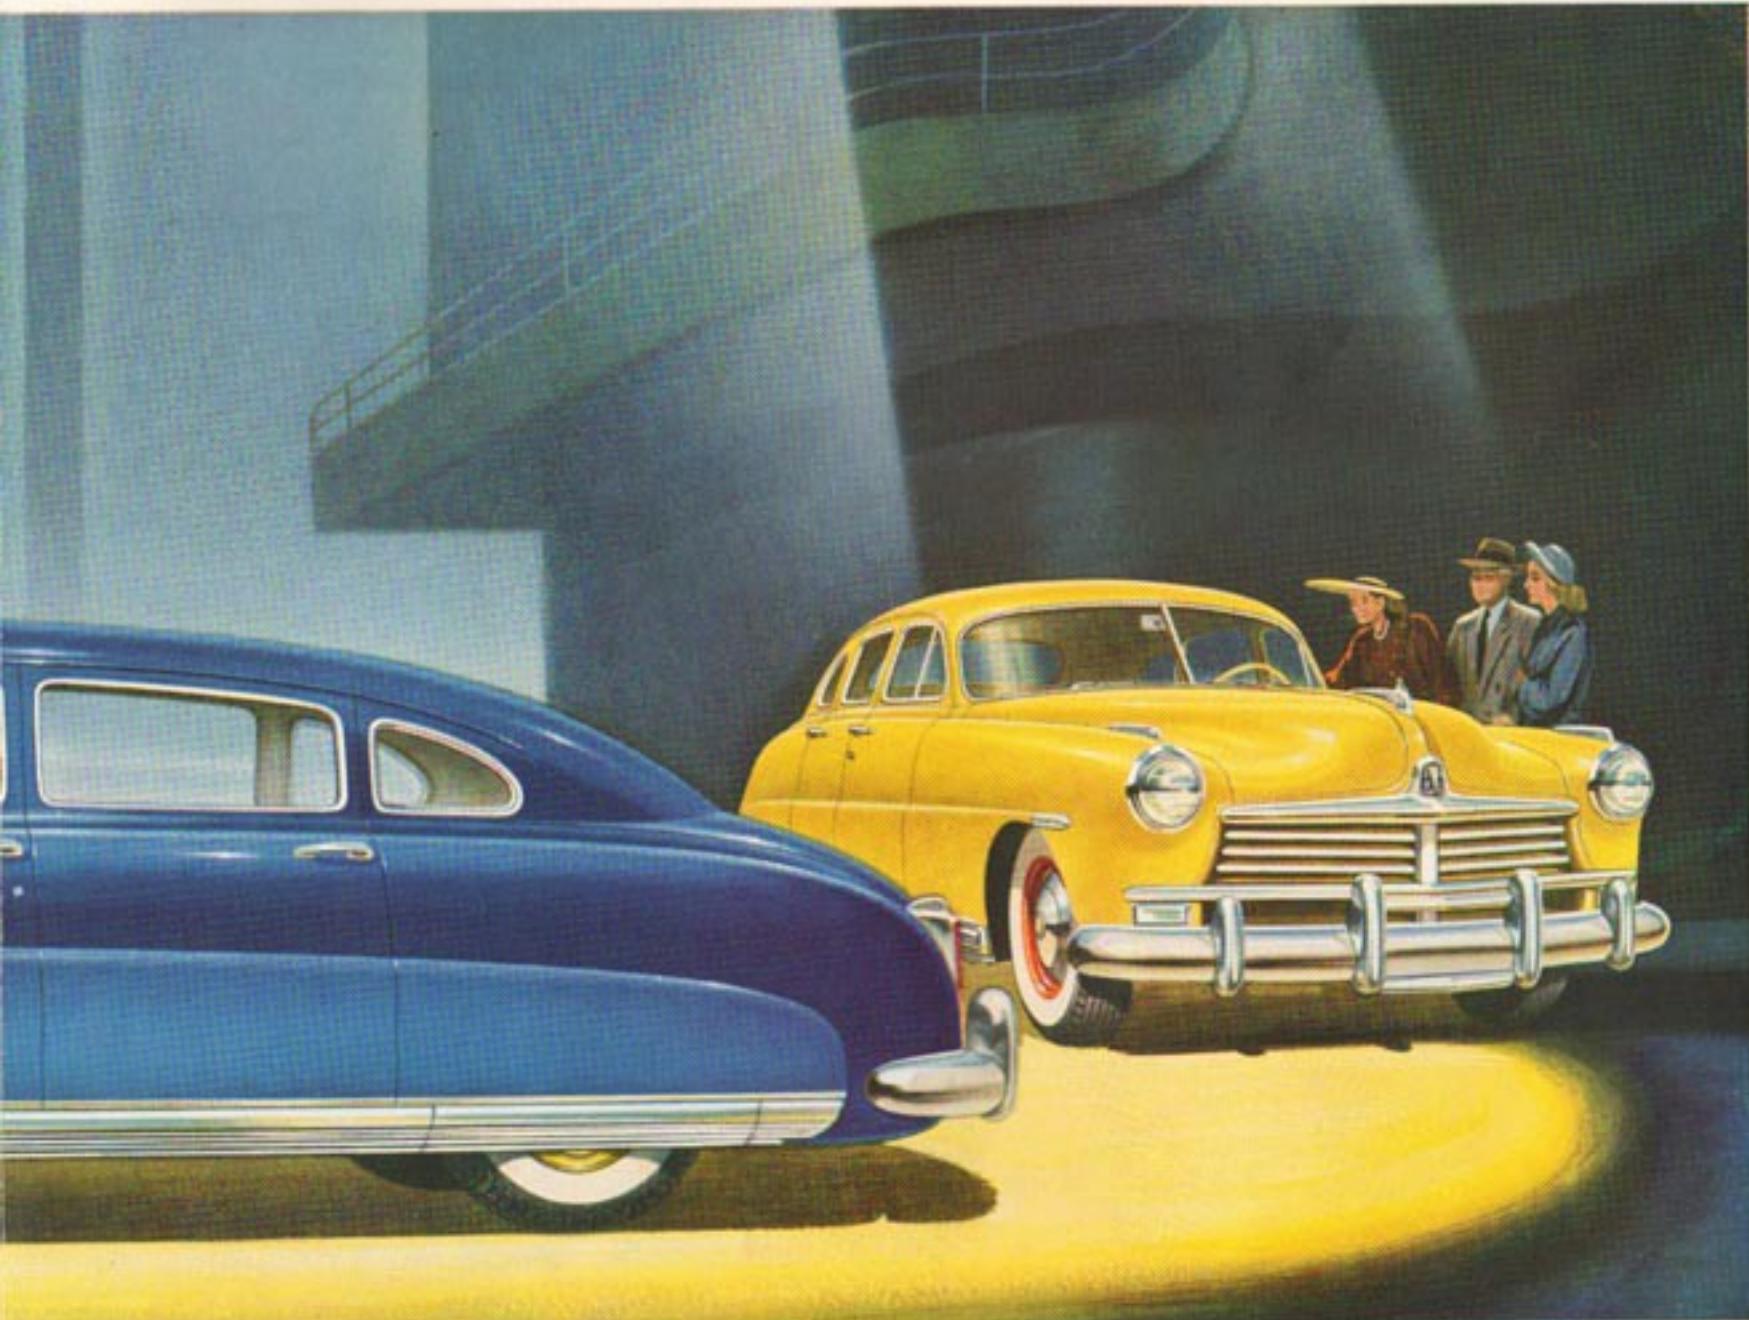

THIS TIME IT'S HUDSON

*Now... you're face to face
with tomorrow!*

Hudson is a symphony of rich color and clean, graceful line so new, so absolutely right, that it is fascinating. Notice the embossed panels sweeping the entire length of this Hudson from the tidy chrome name plates on the side of the front fenders to the massive rear bumpers. This new note in motor-car design combines with a bright metal base running almost the entire length of the car to give the new Hudson an appearance of being in smooth forward motion, even when it is standing still! Take a moment to note the brilliant massive front-end grille with

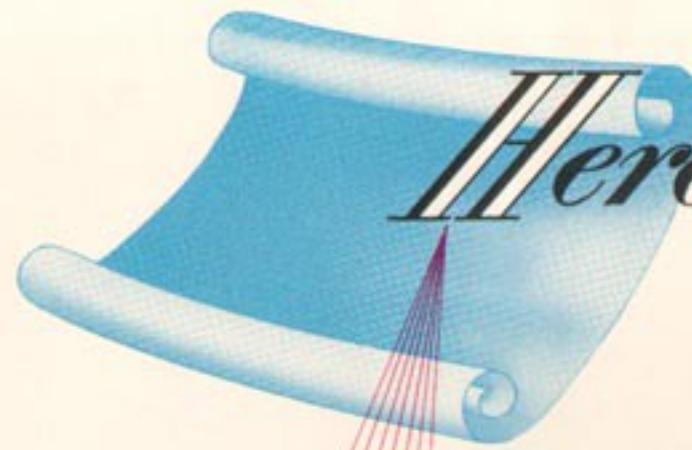

parking lamps integrated with the louver design, and a night-lighted Hudson emblem to top it off at center. Catch that flick of chrome trim along the top of each front fender, and the gracefully curved windshield that sounds a new note in motor-car beauty.

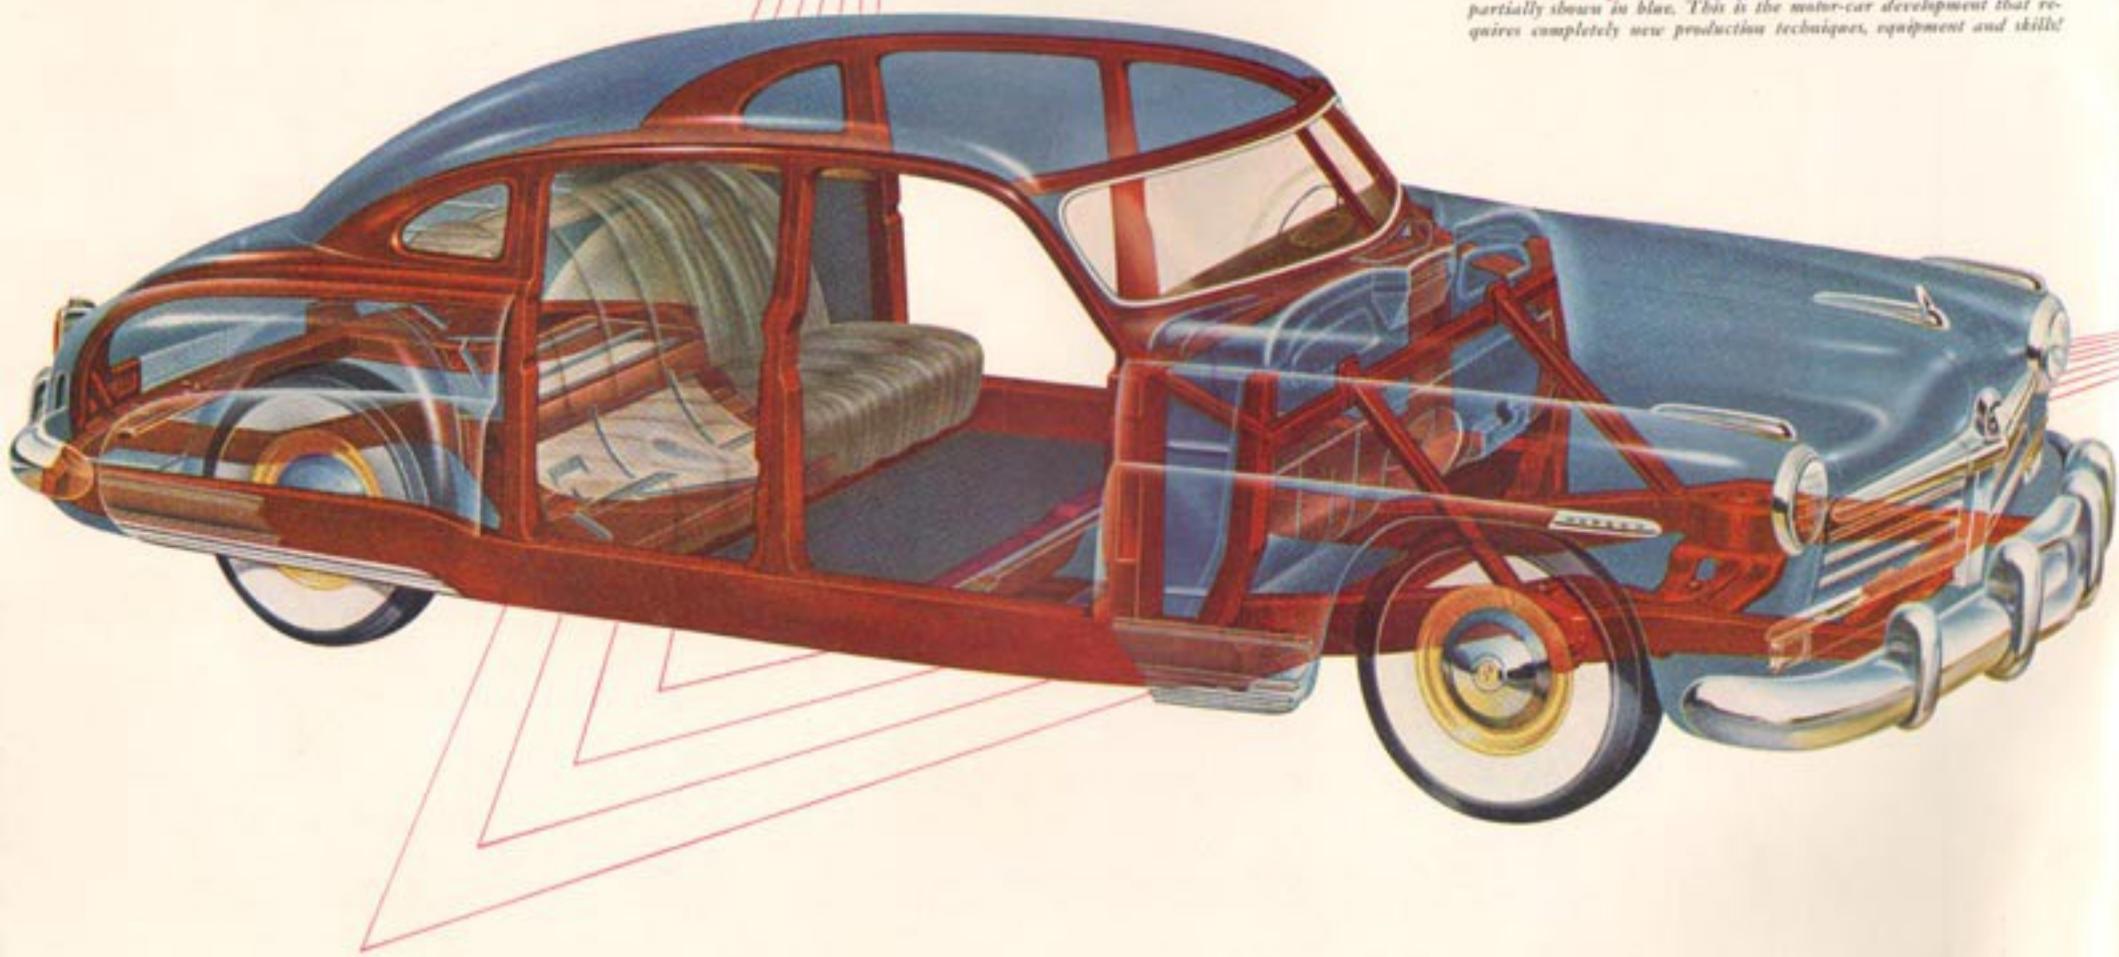

Then look to the left at the sturdy rear-end design in this marvelous new car; the big, chrome-framed twin tail lights, the balanced design of the rear emblem and luggage compartment handle, the generous curved glass rear window; the way side windows are tilted to give more vision

and reduce inside reflections, and the way the whole side of this car is gracefully streamlined!

This new beauty is something to see! It is available in seven popular models and in two Series, a brilliant new Super Series and the distinguished Commodore Series. There is a choice of ten rich body colors, with two special colors and five two-tone combinations available at small extra cost. The pages following in this brochure will show you more beauty, more features, more about the newest new car you've ever seen!

Here's the secret of

*This is Hudson's new, exclusive, all-steel *Monobilt* body-and-frame in phantom view. Notice the floor, shown in dark gray, and how you step down into this new kind of car, how the structural members, shown in red, completely encircle the passenger area, with the rear seat completely ahead of the rear wheels. These members are solidly welded into a single rigid unit with roof, floor and body panels, which are partially shown in blue. This is the motor-car development that requires completely new production techniques, equipment and skills!*

Hudson's triumph

HUDSON designers and engineers meet the challenge of the low-built car with an entirely new kind of automobile!

The Hudson organization offers you a motor car that harmonizes a low sweeping exterior with a roomy, comfortable interior; a car with a new lower center of gravity, a car only five feet from top to ground, yet a car that maintains road clearance!

All of this is made possible by Hudson's new all-steel Monobilt body-and-frame, shown at the left. This unique construction does not require the bolting of a body on top of a chassis frame, but instead it combines body-and-frame in a single, sturdy all-welded unit that provides rigidity and stability heretofore unheard of.

Upon entering the new Hudson, you step down into it, not up on it. As shown in the diagrams below, you ride not on top of a frame, but actually cradled inside of, and completely encircled by, heavy box-steel girders.

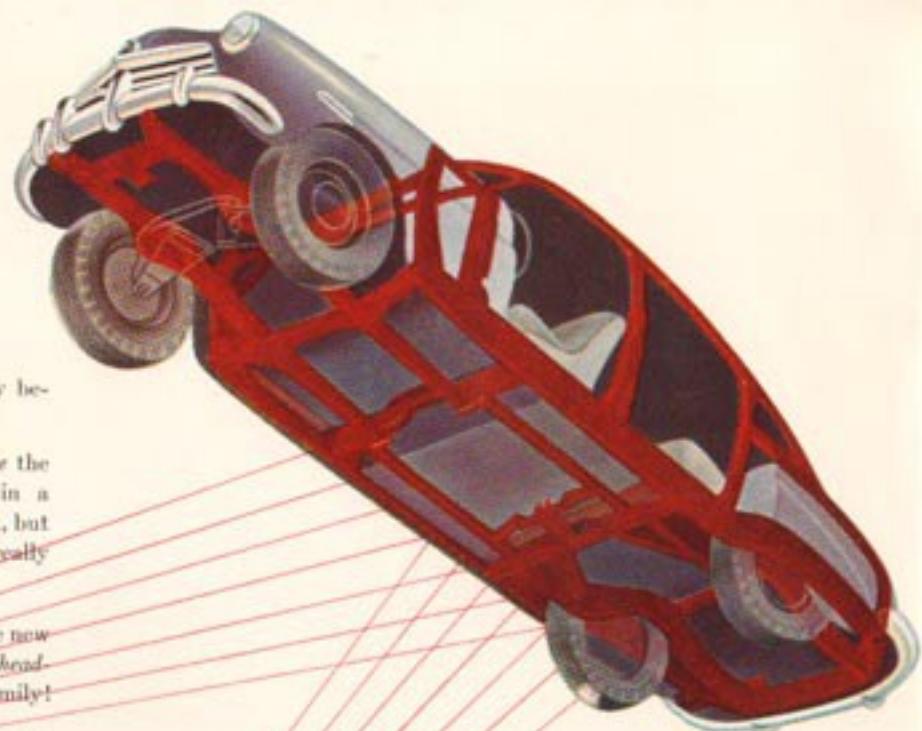

And for even softer going, you also ride not only between axles, but entirely ahead of the rear wheels!

This arrangement of floor and seats *down inside* the Monobilt body-and-frame combination results in a truly low center of gravity not only for car weight, but also for passenger-load weight. This new Hudson *really* "hugs the road" at all times!

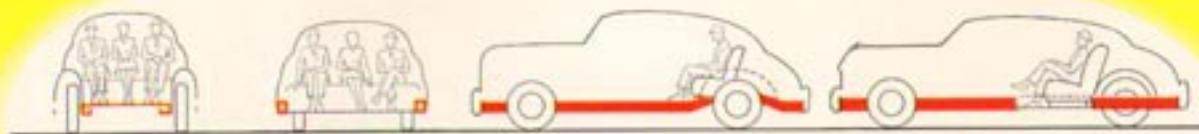

By lowering seats and floor to harmonize with the new lower top, Hudson gives you *more than enough headroom*, front and rear, for the tallest person in your family!

And with this same construction, Hudson provides the new safety of girder protection all around, even outside the rear wheels, as shown at the upper right. Hudson is America's safest car made safer!

The new Hudson—motor car of tomorrow—is available in many popular models, all beautiful in new long, low sweeping lines and gorgeous colors. To see them one by one, simply turn the pages.

Underbody view, Hudson Monobilt body-and-frame. Box-steel foundation members, shown in red, provide girder protection all around, completely outside passenger compartments, and even outside rear wheels.

Conventional Cars
Passengers on top
of frame, *higher*
center of gravity.

The New Hudson
Passenger down with
in frame, *new lower*
center of gravity.

Conventional Cars
Riding over rear axles and
above frame, reduced head-
room and comfort.

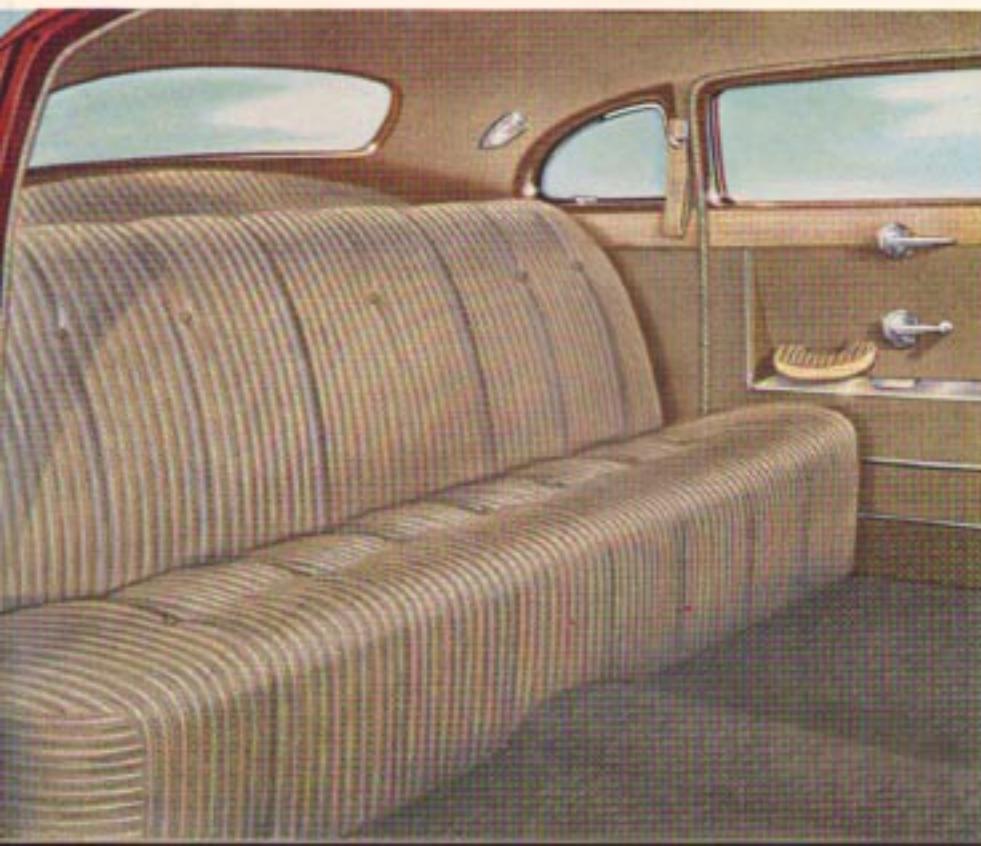

The New Hudson
Riding ahead of rear axle and even
ahead of rear wheels, inside frame,
spacious headroom, new comfort.

Here today...the car they said

Forget for a moment (if you can) those sweeping, low, long body lines, those flashing new colors that mark the Hudson Commodore as the newest car you've ever seen. Let's look inside, let's get inside. Grasp that full rounded handle, press the trigger latch lightly with your thumb, and swing the door wide. Here's something in motor cars the like of which you've never seen before!

There's a pleasant surprise, for you step down into this new Hudson as you enter—an easy movement, so effortless you can hardly believe it! This is your first inkling that the new Hudson is different—that Hudson Monobilt body-and-frame is a unique departure from conventional design.

Look at those seats! The roomiest you've ever seen, front seats five feet four inches wide! Sink down into one. Airfoam! The softest, yet most durable luxury cushioning known! It wears indefinitely without sagging or losing shape.

Interior, Rear Compartment, Commodore Sedan

Here's a close-up of the richest, roomiest, most comfortable motor-car rear compartment you can imagine. Big chrome band holds up back of front seat, along with generous robe cord and envelope-type pocket for parcels and periodicals. Conveniently placed assist straps. Shown at the right, big "two-person" arm rest in down position, full sixteen inches wide. Easily folds back flush with back of seat. Airfoam upholstered.

Stretch your legs, swing your arms, sit upright or sprawl as you please. Room! Blessed room! Head room, no matter how tall you are; leg room, elbow room, and plenty of it, even if there were two other grown people in the seat with you. Now you begin to see some of the many wonderful things Hudson Monobilt construction does for you.

Look around once more. Notice those recessed panels along the side with smart door handles, window cranks, arm rests, ash receivers (one at each end of every seat) all inset, out of the way so you get full use of every inch of this widest of all motor car interiors. Notice, too, how trimly everything is tailored in tan or gray Broadcloth upholstery and soft, harmonizing carpeting. See how it's all set off with newly designed chrome fittings, and mouldings in satin-finish natural walnut color through the instrument panel and back around the rear compartment in Commodore models.

It's grand, it's glorious, and there's even more! There's a place for everything in this new Hudson, a wide, deep package locker with a sturdy lock in the instrument panel, a generous shelf up behind the rear seat, and a compartment out back that simply swallows luggage!

Then mark those niceties that say, "Great car!" Curved glass windshield that lends new distinction while it provides full forward vision; front seat that rises as it moves forward at a finger touch; courtesy lights on all doors that beam out as doors are opened and three dome lights so skillfully placed they put light where it's needed in Commodore models; latch-type swinging ventilating wings in sedan rear quarter windows; and a host of other touches that all add up to this: When you look closely at the new Hudson, both your pride and your good judgment will prompt you to say, "That's for me!"

was years away!

The Commodore Series FOUR-DOOR SEDAN

More than enough room for six passengers . . . 124-inch wheelbase . . . available with 121 b.p. new Super-Six engine or 128 b.p. improved Super-Eight engine. Choose from ten standard body colors. Two special body colors and five two-tone color combinations, and white sidewall tires, at extra cost.

You're in command with Super

When you see the exciting new Hudson, accept your invitation to slip in behind the wheel. That's more than half the thrill!

From the moment you touch the starter button in this great car, you realize you've got hold of something thrilling, something so alive, so eager to do your bidding that you know right away it belongs in your scheme of things.

When you press the accelerator, there's a surge of silent power from Hudson's new Super-Six engine, or from the improved Super-Eight, that gives you a wonderful sense of command. The response is so quick, so smooth, so silent that it tells you there's plenty of reserve power to meet anything you might call on this car to do.

And this new Hudson will open your eyes to even more great things about the motor car of tomorrow! It has true Center-Point steering—usually found only in the most expensive cars—easiest to handle, most accurate and positive-acting system known! Hudson clutch action is velvety smooth; brake pedal, accelerator—all controls in the new Hudson—are conveniently located, instantly responsive, effortlessly operated, yet decisive in action.

Get set for something astonishingly pleasant when you try Hudson's Drive-Master, available on all models at extra cost. This is the easiest of all ways to drive! Nothing new to learn—you simply accelerate as long and as fast as you like in Hudson's silent pick-up gear, then lift your toe ever so slightly, and you're in high!

There's no clutch pushing, no gear shifting in forward speeds—yet you change gears whenever you're ready! Drive-Master does all the work, but *you're in command!* That's important in traffic or cross-country driving.

And when you try Hudson's Drive-Master, combined with the Hudson version of Overdrive, available on all models at slight extra cost, you have three forward speeds that give you delightful flexibility for any driving situation you can imagine. Overdrive enables you to maintain a given car speed with the engine running only about 7½ per cent as fast as in direct drive. Smoother, quieter, less gasoline and engine wear.

Here's more: When you want to stop with Drive-Master, there's no clutch pushing, no gear shifting, just use your brake. When you stop, you stop! No creeping, your car stands perfectly still.

If you wish to use hand shift without using your clutch, just turn a button on the instrument panel to left position for Vacumotive drive. Or if some members of your family prefer conventional driving, you just turn the control button to center "off" position for manual clutch and hand-shift driving.

This is really "eating your cake and having it, too!"

"Super driving" is more than a pair of words with the new Hudson, as even a trip around the block shows you. It's an introduction to a wholly new world of motoring ease and pleasure!

Here's the smartest thing on wheels!

Close-up, the new Hudson Commodore Convertible Brougham—low, wide and handsome! Finger-tip hydraulic controls raise or lower top and windows (also available on Super Series Convertible at extra cost). Both Series upholstered in your choice newly-developed, water-repellent, weather-resistant fabric in either of two colors; or in leather with your choice of three colors: red, tan or gray. Choice of three colors in top material. Airfoam cushions on both Super and Commodore Series. Hudson's new Monobilt body-and-frame make this car a land-yacht for the younger set—and for those who are young in heart!

Driving...

The Commodore Series CONVERTIBLE BROUHAM

Six passengers . . . 124-inch wheelbase . . . 128 h.p. improved Super Eight engine. Also available in the Super Series with 121 h.p. new Super Six engine. Three top colors to harmonize with body colors. Choose from ten standard body colors, fabric upholstery in either of two colors, or leather in one of three colors. Two special body colors, five two-tone combinations, and white sidewall tires, at slight extra cost.

Smooth going that lets you loll

Just to look at the new Hudson is to get a touch of wanderlust, for this car has sweeping lines and beautifully balanced design that whisper an eager "let's go!"

The minute you're under way, you know there's something different, something pleasantly exciting about riding in this automobile. Hudson's new all-steel Monobilt body-and-frame cradles you so low, so snug to the road that you get a feeling of serene, comfortable going unlike anything you've known before!

Passers by in conventional cars seem to be up in the air, riding *on top* of the frames of their cars, instead of down within the frames—which is actually the case! But you, in a new Hudson, realize you're encircled by heavy box-steel girders completely outside the passenger compartment; you settle down on a luxuriously upholstered seat behind a beautiful big steering wheel,

and say to yourself, "Now I'm finding out what they mean by 'new kind' of an automobile!"

A slight pressure on the accelerator calls forth a rush o' power that is positively thrilling (and there's more about that on the pages that follow). Hudson's sleek new lines slip through the wind in near-complete silence. Power is used to propel you along, not to baffle wind resistance—and this has a pleasing effect on your pocketbook, as well as on your driving ease!

The first curve you come to unfolds more about this amazing new automobile. It "hugs" the road like nothing you've ever seen before! This car is wider than it is high, and gusts of cross wind and curves that you would ordinarily expect to sway it, slip by unnoticed.

It has a unique combination of soft-acting coil springs in front, and long, leaf springs in back. Rear springs are set in splayed position to give wide, firm support and greater stability for this new Hudson.

A new kind of low-pressure Super-Cushion tire—standard equipment on all models—combines with direct-action shock absorbers, front and rear, to give you the smoothest ride you can imagine. Sway bars and all-steel Monobilt welded one-piece body-and-frame make this car rigid, give it roundability—an even, sure way of going that lets you loll away the miles!

Instrument Panel, Commodore Series . . . two harmonizing shades of walnut color. Airplane-type dials in a beautifully symmetrical design. Teleflash warning signals if oil pressure or generator charging rate should fall below safety point. Dials and needle indicators all indirectly night-lighted through refracting plastic to eliminate glare. Radio speaker on top of horizontal shelf ahead of instrument panel for better acoustical results.

The Commodore Club Coupe . . . invites you to relax in comfort for a neighborhood errand or a transcontinental spin! Wide doors, front seat backs that tip forward as they tilt forward provide easy entrance and exit. Crank-operated, full-opening rear quarter windows. Roomiest seats you've ever known, plenty of leg room front and rear—a gorgeously trim interior!

away the miles

The Commodore Series CLUB COUPE

More than enough room for six passengers . . . 124-inch wheelbase . . . available with 121 h.p. new Super-Six engine or 128 h.p. improved Super-Eight engine. Choose from ten standard body colors. Two special body colors and five two-tone color combinations, and white sidewall tires, available at extra cost.

You get new protection... all

As the long, low lines of a new Hudson charm your eye, it's reassuring to know that they sprang directly from a new kind of design that gives you the safest car ever built.

Yes, your new Hudson is America's safest car made safer!

You ride within the new all-steel Monobilt body-and-frame. Box-steel girders, welded into a solid unit, encircle passenger compartments front, sides and rear! Skyscraper construction techniques give Hudson's Monobilt body-and-frame a rigidity, a stability—a safety factor—impossible in other kinds of automobile construction.

Designed to hug the ground—77 inches wide and only 60 inches high—the new Hudson has a truly low center of gravity—much lower than other cars. This gives you the stability of a basic pyramid design!

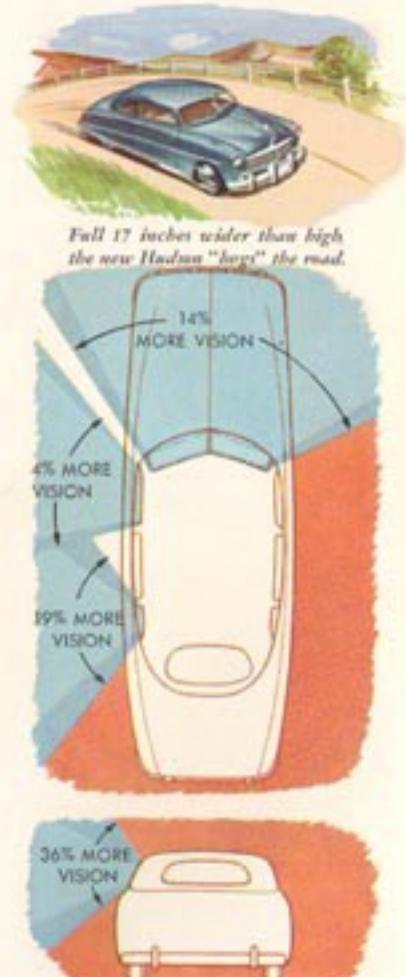

Look at the massive wrap-around bumpers, front and rear. This isn't a mere show-window display of strength; the rear bumper, for example, is directly and rigidly secured to basic body-and-frame girders.

There's new safety in Hudson's unhampered vision—with a window area of over 2,500 square inches in Sedans or Broughams, only slightly less in Club Coupe models. From any seat, an exceptionally wide field of vision opens to you, as illustrated in the charts to the right which diagram vision increases in the new Hudson. Gentle curves of windshield and rear window have a reason other than beauty, too. Reflections are broken up by the curve—for pleasanter driving.

You'll know more about Hudson safety the moment you take your first drive. As the road unrolls, enjoy near-effortless steering. Take the sharpest turn . . . easily, sweetly. True Center-Point steering (usually found in only the most expensive cars) takes the "fight" out of tortuous roads.

You'll notice other safety features. Of course, there are Hudson's exclusive triple-safe brakes (described on page 14) and safety glass in every window. Note the absence of reflections—interior surfaces are finished to prevent eye-strain. Even the instruments on the dash are indirectly lighted by glowing, plastic figures. Check interior hardware, recessed to prevent bumps and bruises.

Nothing has been spared in your new Hudson to give complete peace-of-mind during your every moment as driver or passenger. Combine outstanding safety with dashing beauty and breath-taking performance . . . There's but one conclusion: "*This time it's Hudson!*"

The Super Series Four-Door Sedan . . .

A brilliant, beautifully finished and tailored motor car. Dark walnut color instrument panel and window garnish moldings; Bedford Cord upholstery, blended in tone with richly colored interior fabrics; new wear-resistant, fabric-finish rubberized floor covering in front compartment—this is tomorrow's car today.

the way around

The Super Series FOUR-DOOR SEDAN

More than enough room for six passengers . . . 124-inch wheelbase . . . available with 121 h.p. new Super-Six or 128 h.p. improved Super-Eight engine. Choose from ten standard body colors. Two special body colors and five two-tone combinations; bumper guards and white sidewalls, at extra cost.

Put your foot down...you know

Only Hudson gives you triple-safe brakes!

AS YOU bring a Hudson to a gliding stop, you'll enjoy a special tingle of authority, for Hudson—and Hudson alone—offers you triple-safe brakes—three methods of brake application!

For general use, Hudson provides powerful hydraulic brakes; a feather's pressure brings them into action. "Servo-action" type brakes actually make use of the forward rotation of the wheels and convert it into extra braking pressure.

You stop surely . . . easily. There's credit here to Hudson's centrifuse brake drums. Cast-iron braking surfaces are spun-fused into a steel outer shell. A superior braking surface is furnished.

No nose dives, with normal or most unexpected stops—thanks to a perfect balance between car weight and brake surfaces. Hudson stops are true, "even keel" stops!

For even greater safety, Hudson gives you a second brake system! In reserve, slim though the chances are that you'll need it, is a mechanical braking system, ready to take over automatically from the same brake pedal if hydraulic pressure should fail, as it might in any car through accident or service neglect. These mechanical brakes quickly go to work the instant your brake pedal reaches a point a few inches from the floor.

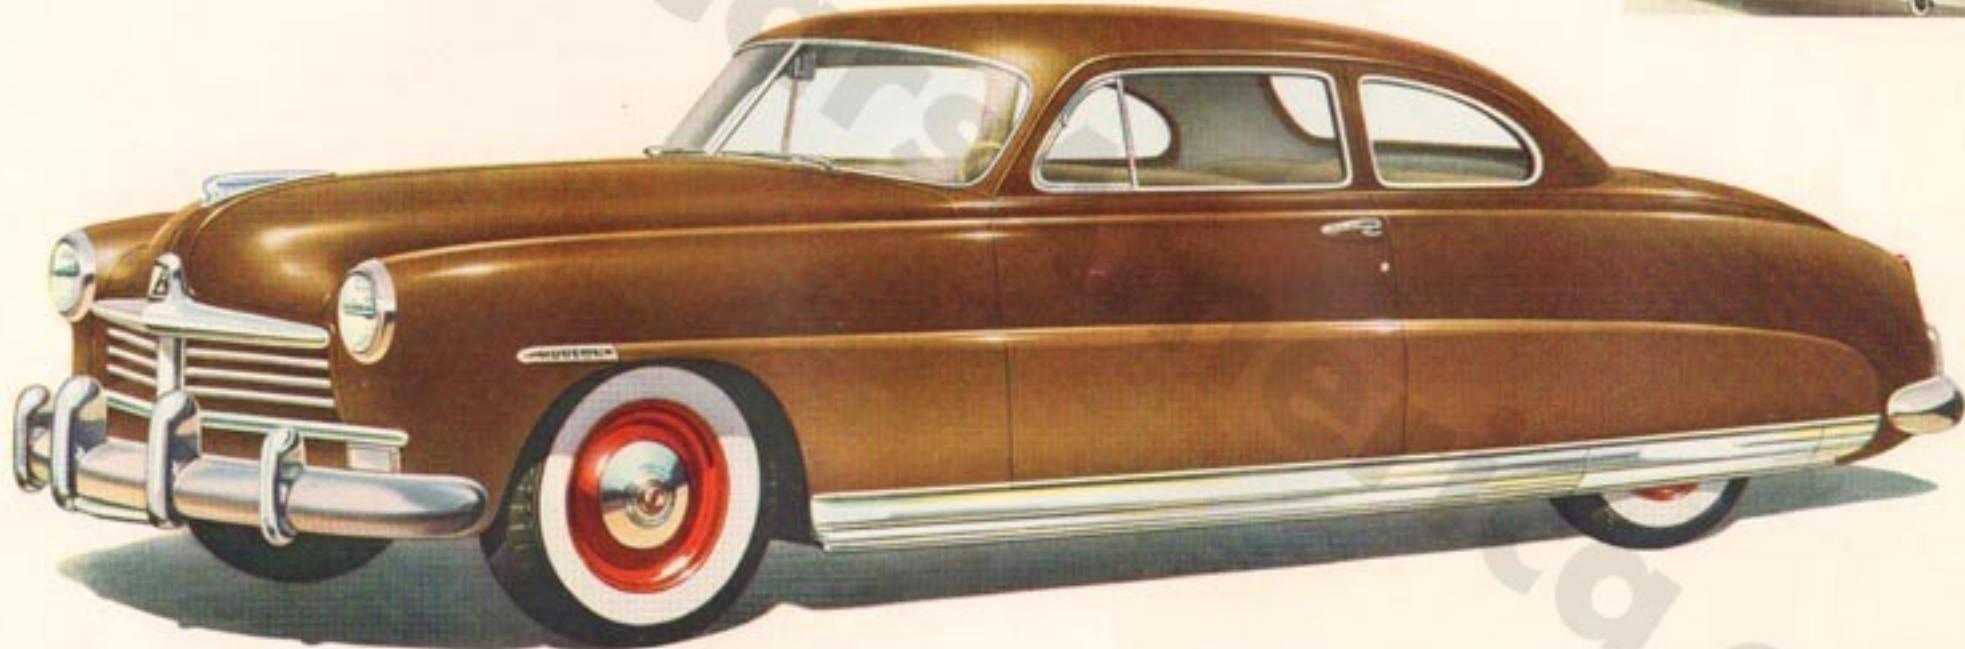

Control of a third method of brake application is only inches from your left hand. Parking brake is operated by hand lever at the left, under the instrument panel. A flick of the fingers releases it.

Safety for you and your family is a foremost thought at Hudson. This is truer today than ever before . . . expressed in Hudson's exclusive triple-safe brakes—for the car of tomorrow.

Hudson's Triple-Safe Brakes

Put your foot down on the Hudson brake pedal and call (1) the finest 4-wheel hydraulic brakes into service. Controlled by the same pedal is (2) a reserve mechanical brake system—automatically at work if the pedal should pass the point indicated. Reserve brakes are under your right foot, where they belong! Finger-tip release parking brake (3) is at easy grasp under the left side of the instrument panel.

you'll stop

The Super Series CLUB COUPE

More than enough room for six passengers . . . 124-inch wheelbase . . . available with 121 h.p. new Super-Six or 128 h.p. improved Super-Eight engine. Choose from ten standard body colors. Two special body colors and five two-tone color combinations, bumper guards and white sidewall tires, at extra cost. Also available in Super Series three-passenger business coupe with 121 h.p. new Super-Six engine.

Fifteen pieces of luggage easily arranged inside the spacious rear compartment of Hudson Club Coupe—typical of the generous luggage space in all new Hudson models.

How to make friends with

Take winter's worst with a smile. Hudson Weather-Control, available for all models at extra cost, takes the sting from the north wind, the bite from a blizzard.

Your car is filled with warm *fresh* air—gently pressure circulated. Frost is banished from windshield. Ankle-chilling drafts are gone.

Down comes the rain, but your Hudson's windows are free from fog. With any convenient window or ventilating wing open just a bit, and with cowl ventilator open, you enjoy abundant fresh air. It's your Hudson Weather-Control at work!

One compact unit, installed under the dash, incorporates a heating-ventilating-defrosting system. It's more than just a heater. Weather-Control fool-proof design works like this:

Fresh *outside* air flows through cowl ventilator to your Weather-Control. Only air gets in—rain is trapped to drain off; dust, dirt

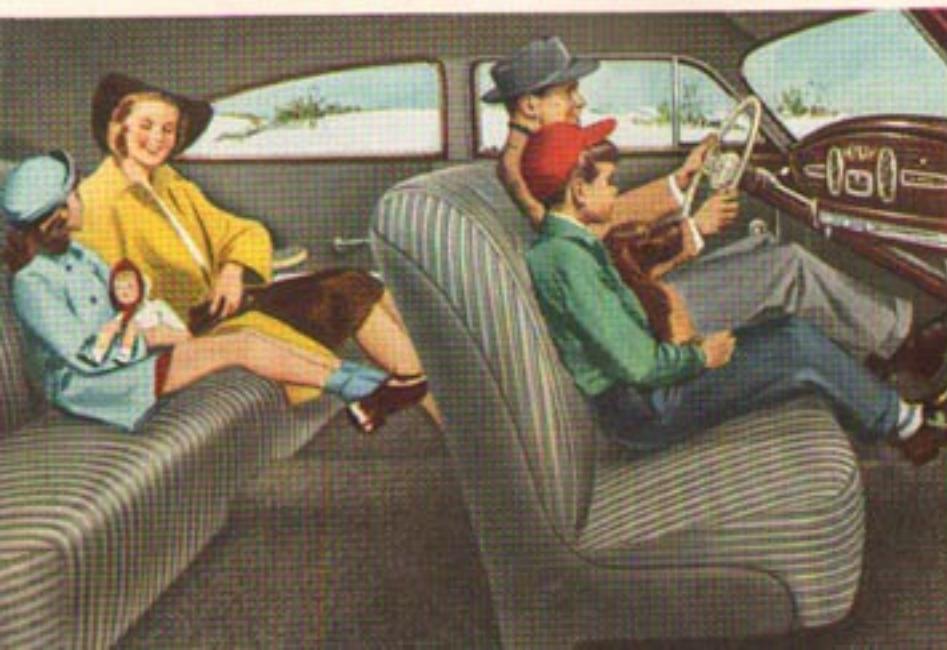

and insects are blocked by a sturdy screen. Car movement forces in plentiful air, and if traffic causes you to slow down or stop, a quiet electric blower (switch operated) brings in air.

Air is warmed in winter to the temperature you desire. Air volume is adjusted by the amount the cowl ventilator is opened. You select the temperature. Fresh, warmed, filtered air is circulated throughout the interior. Weather-Control helps keep you alert, it does not re-heat and re-circulate "dead," smoky inside air.

In summer flip the control lever to "cooler" and end heating—you still get fresh filtered outside air.

Circulating fresh air keeps windows steam-free. Windshield defrosters melt away snow and ice. Silent windshield wipers complete the work of maintaining perfect vision.

Hudson's way of *doing something* about the weather is another of those delightful features that tell you this is a great car!

Sleek and spacious, a "dream" of a family car!

Interior, new Super Series Hudson Two-Door Brougham, beautifully tailored in Bedford Cord upholstery and broadcloth side panels. Backs of front seats turn inward as they hinge forward for easy entrance and exit. Crank-operated full-opening rear window. The new Hudson gives you more usable space from side to side and from bumper to bumper.

Arrange your own inside weather!

Just open the cowl ventilator and Hudson's Weather-Control pours into your car two or three times as much fresh outdoor air as other systems using long, angling ducts. You enjoy conditioned-air comfort—filtered, dust-free, warmed as you choose, pressure circulated to every interior part of your new Hudson. It keeps you fresh and alert, even on long drives.

winter

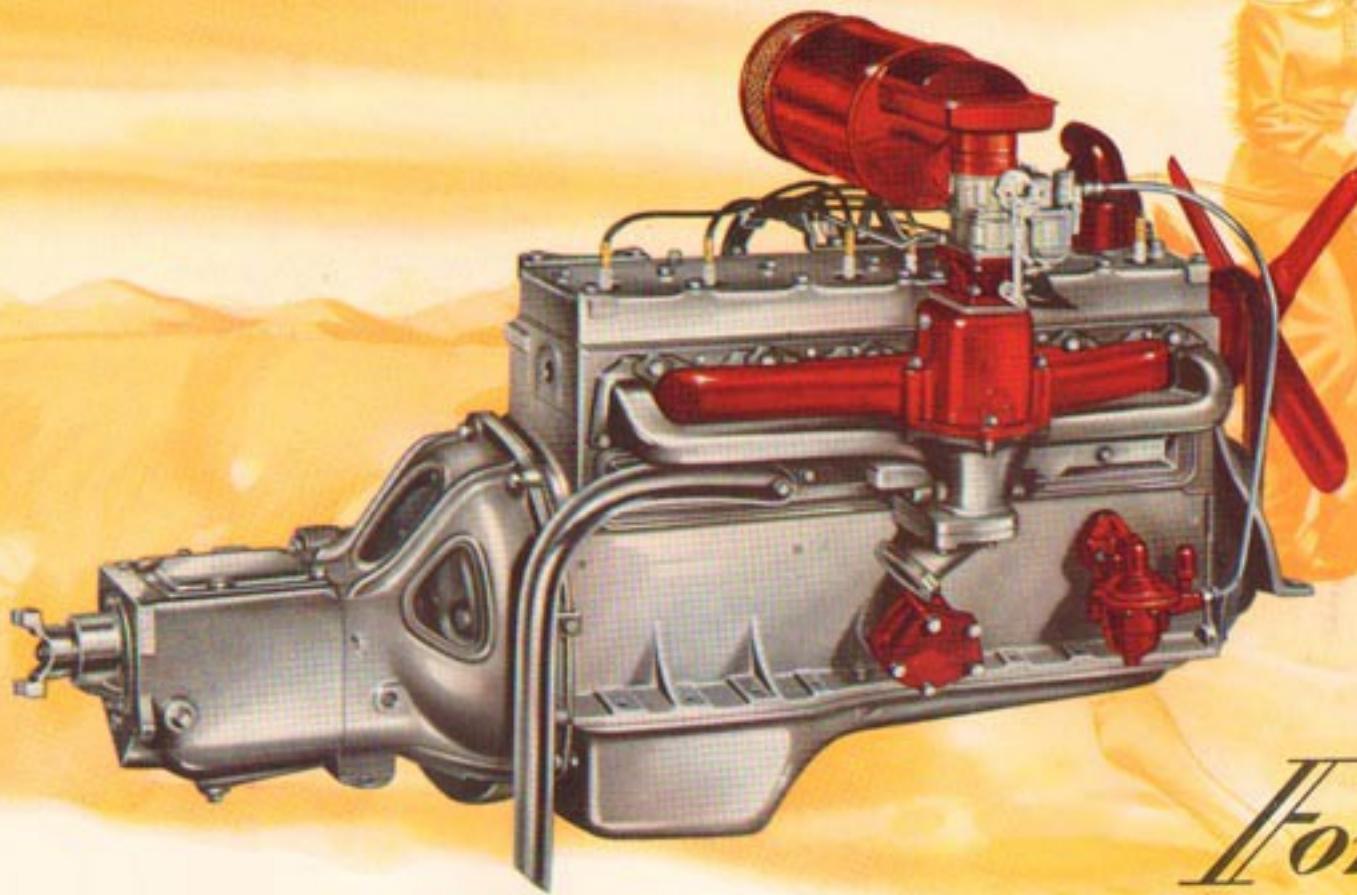

The Super Series TWO-DOOR BROUHAM

Room and to spare for six passengers . . . 124-inch wheelbase . . . available with 121 h.p. new Super-Six engine. Choose from ten standard body colors. Two special body colors and five two-tone color combinations, bumper guards and white sidewall tires, available at extra cost.

Rarin'

For those who

Super Six ENGINE SPECIFICATIONS

If you've ever longed for a six that can "show its heels" to any other six on the road—and to many eights, too!—here's your engine. Hudson designers and engineers who made the Super-Six famous have created the greatest *Super-Six* of them all, a new, smooth six-cylinder engine that has more power and can easily out-perform anything of its kind!

Features include 41 points of direct pressure lubrication—more than any other six-cylinder engine—long-life chrome alloy cylinder block, water cooling around all cylinder walls, dual carburetion, self-sealing powerful water pump, and quiet fan with sound-adjusted blades. In addition to outstanding economy and performance, this new engine has many more important features listed to the right.

6-CYLINDER, L-HEAD, 121 horsepower at 4000 r.p.m.; Compression ratio, 6.30 to 1; Bore, 3 $\frac{1}{2}$; Stroke, 4 $\frac{1}{2}$; Displacement, 262 cubic inches.

CYLINDER HEAD: High turbulence type for better fuel combustion.

CRANKSHAFT: Forged in position, fully compensated and equipped with rubber-insulated vibration damper, balanced at rest and in motion. Four precision type, steel-backed, babbitt-lined main bearings.

PISTONS: T-slo, cam ground, aluminum alloy fitted with four pinned, plated piston rings.

CONNECTING RODS: Drop-forged, high manganese alloy, with replaceable, steel-backed, babbitt-lined precision type bearings. Rifle-drilled for positive lubrication to piston pin bearing.

VALVES: Special alloy. Exhaust valves are of high nickel-chrome alloy. Both intake and exhaust valves installed at angle for faster flow. Grooved for conical spring seat retainer. Valve seats integral with cylinder block, cooled around entire surfaces.

TAPPETS: Improved, rotating mushroom type with special self-locking adjusting screw. Pressure lubricated.

CAMSHAFT: Nickel-chrome-molybdenum-iron-alloy for quiet operation—with angular ground cams for positive rotation of tappets. Heat treated for extreme hardness. Driven by silent chain of improved type. Bearings pressure lubricated.

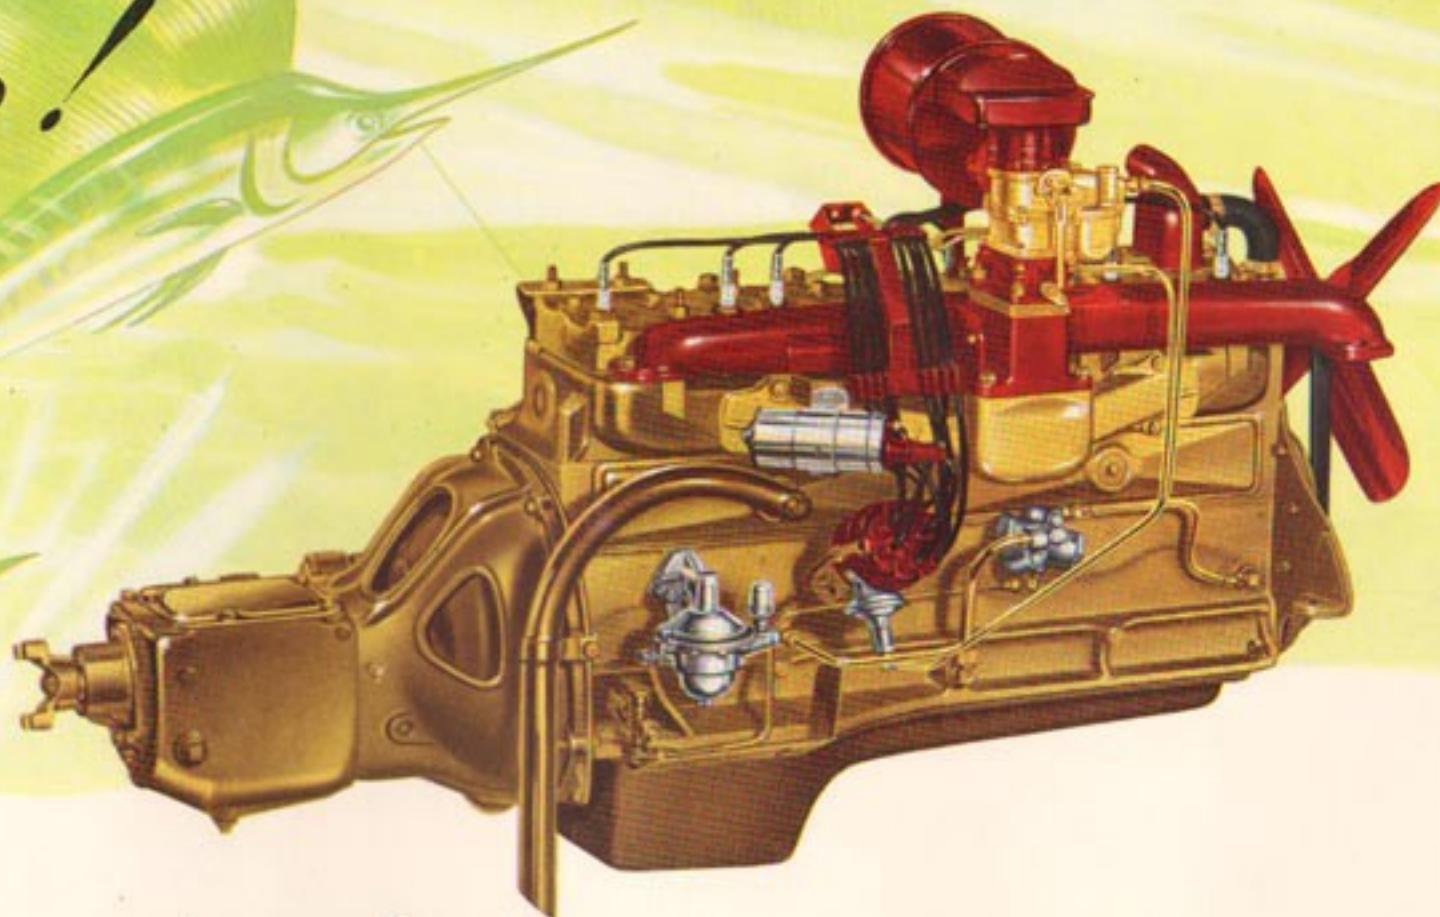

CYLINDER BLOCK: High chrome alloy, entire block as hard as valve seat inserts used in many cars. Water jackets full length of cylinders and all around each cylinder.

CARBURETION: Dual flow with more direct passage of fuel to combustion chamber through radial manifold. Down-draft type. Automatic choke. Climatic control.

LUBRICATION: Full pressure lubrication to 41 points. Oil refill capacity 7 quarts. Float type oil intake draws clean oil from point just below top level in oil pan.

COOLING SYSTEM: Cellular-tubular type radiator, improved ball bearing type six-blade, self-sealing pressure pump with large impeller. Capacity 17 quarts. Thermostatically controlled by-pass for quick engine warm-up. Fan blades acoustically positioned to minimize sound.

to go!

want action!

Super Eight ENGINE SPECIFICATIONS

This improved Hudson Super-Eight engine is the answer for people who want action and to spare, coupled with the smooth performance that only an eight can give. This famous engine is the basic power plant for Hudson-built cars that hold more official AAA stock-car records than are held by any other motor car. It has established a name for itself in performance, endurance and economy that has not been matched.

Whether you're traveling in traffic or heading out along the highway, you'll get a thrill out of the way this great Super-Eight engine performs. When you want action, here's the engine built to give it in full measure!

8-CYLINDER, L-HEAD, 118 horsepower, at 4200 r.p.m.; Compression ratio, 6.50 to 1; Bore, 3 inches; Stroke, 4½ inches; Displacement, 254 cubic inches.

CYLINDER HEAD: High turbulence type for better combustion.

CRANKSHAFT: Drop-forged, fully compensated and equipped with rubber-insulated vibration damper, balanced at rest and in motion; five long-wearing, bronze-backed main bearings.

PISTONS: T-slot, cam ground, aluminum alloy fitted with four pinned, plated piston rings.

CONNECTING RODS: Drop-forged, high manganese alloy for greater strength, dowel-fitted caps assure perfect alignment. Bearings with centrifugally installed babbitt metal.

CAMSHAFT: Nickel-chrome-molybdenum-iron-alloy for quiet operation—heat treated for maximum hardness, specially treated for smooth finish. Large babbitt bearings.

TAPPETS: Exclusive roller cam design. Rotating cam lobe maintains constant contact, requires less adjustment, wears longer.

VALVES: Special alloy steel. Exhaust valves have high chrome content to resist high temperatures.

CYLINDER BLOCK: Super-hard chrome alloy. Provides wear resisting cylinder bores, eliminates need for special valve seat inserts. Entire block is as hard as valve seat inserts used by many manufacturers.

CARBURETION: Down-draft type. Dual flow to combustion chambers for more complete combustion. Radial intake manifold provides direct, free flow passages. Automatic choke. Climatic control.

LUBRICATION: Exclusive Duo-Flo supplies oil in direct ratio to engine speed. Lubricates every part at first turn of crankshaft. Float-type oil intake draws clean oil from point just below surface of oil in pan.

COOLING SYSTEM: Cellular-tubular type radiator. Improved ball-bearing type six-blade self-sealing pump with large impeller. Capacity 18 quarts. Thermostatically controlled by-pass for quick engine warm-up. Fan blades acoustically positioned to minimize sound.

All yours, but only

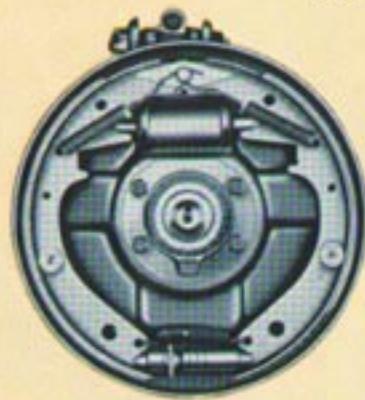

Brake drums are steel backed with cast iron facing "spun" into position. Lighter and stronger . . . resistant to heat.

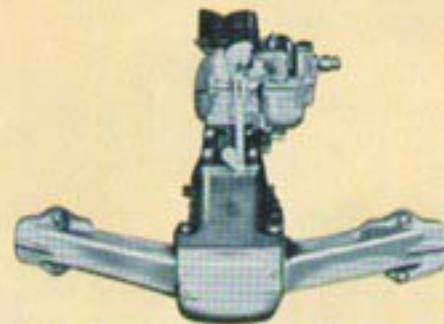

Steel flywheel lighter and stronger than ordinary types. Made possible by Hudson dynamically-balanced crankshaft . . . makes starting easier.

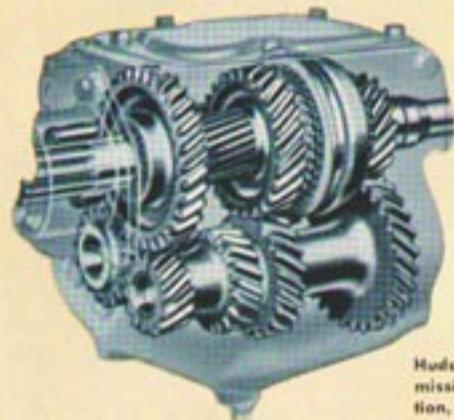

Hudson's exclusive fluid cushioned clutch provides soft easy engagement and longer life. Costs more to build, but costs less for you to operate.

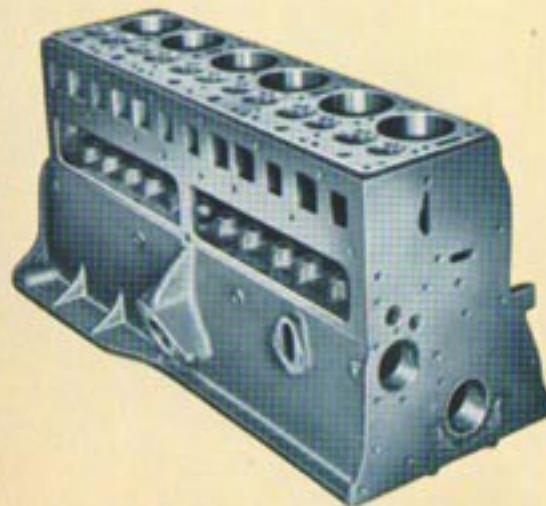

Servo-action brakes take advantage of car's momentum to help stop . . . movement of wheel presses shoe tighter when brakes are applied.

Dual carburetion in Hudson Super-Six and Super-Eight engines provides direct flow and equalizes distribution of fuel mixture to all cylinders, for uniform and complete combustion, better performance and economy!

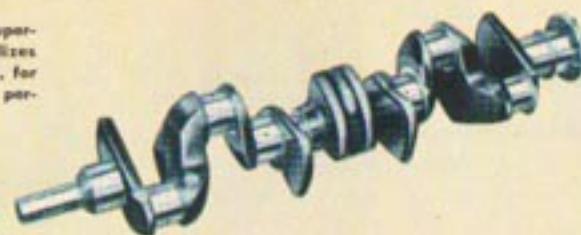

Hudson's synchronized, silent mesh transmission . . . easy to shift, silent in operation, long lived.

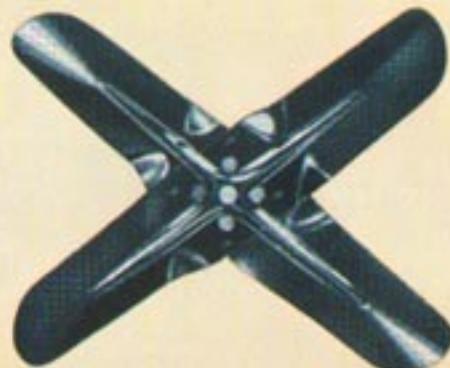

High chrome-alloy cylinder block eliminates need for valve seat inserts, outwears ordinary blocks by thousands of miles.

Hudson-designed spark plugs . . . fluted porcelain reduces shorting due to moisture, radiates heat more rapidly for longer life.

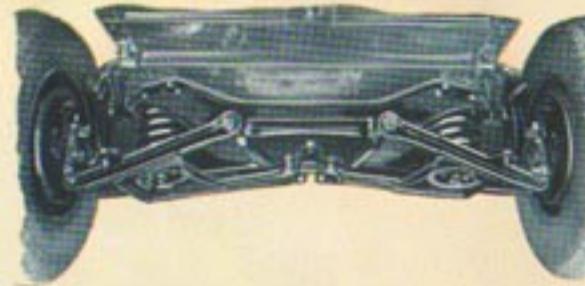

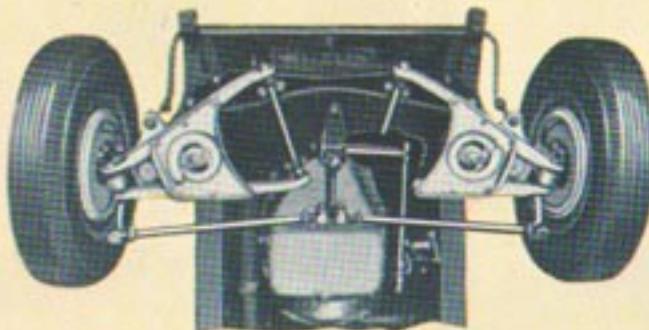

Crankshaft is dynamically and statically balanced for more accurate balance and greater strength. Six-cylinder crankshaft forged in position. Four main bearings on Super-Six. Five main bearings on Super-Eight.

Fan is designed with scientifically positioned blades to reduce noise without loss of cooling efficiency.

in Hudson

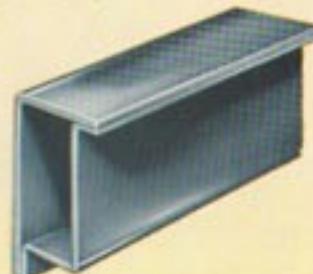

Coil springs in front and leaf springs in rear . . . finest combination known for easy riding and stability.

Ignition coil inverted on eight, horizontal on six . . . reduces chance of moisture affecting electrical system. Shorter high-tension lead improves spark, reduces radio interference.

Generator is oversize, air cooled, more than adequate capacity for charging battery when under heavy loads or for use with electrical accessories.

Box-type frame members used throughout for greater strength and rigidity. Give maximum strength without increasing weight.

Direct-action shock absorbers provide controlled ride on bumpy roads. Greater capacity of cushioning fluid than other types.

Hudson-built cars *hold 149 official AAA records**

HUDSON-BUILT motor cars now hold more official stock-car records than any other make. All were gained in carefully supervised American Automobile Association official contests which Hudson entered not just to make records, but as a means of making doubly certain that you get performance, safety, economy and endurance when you invest in Hudson.

Performance . . . Hudson's "wins" include stock closed-car marks ranging from one kilometer to the famous

24-hour record. The latter is open to all stock cars regardless of size or class. Hudson has won and held this record, as well as hill-climbing and acceleration records, against cars costing far more.

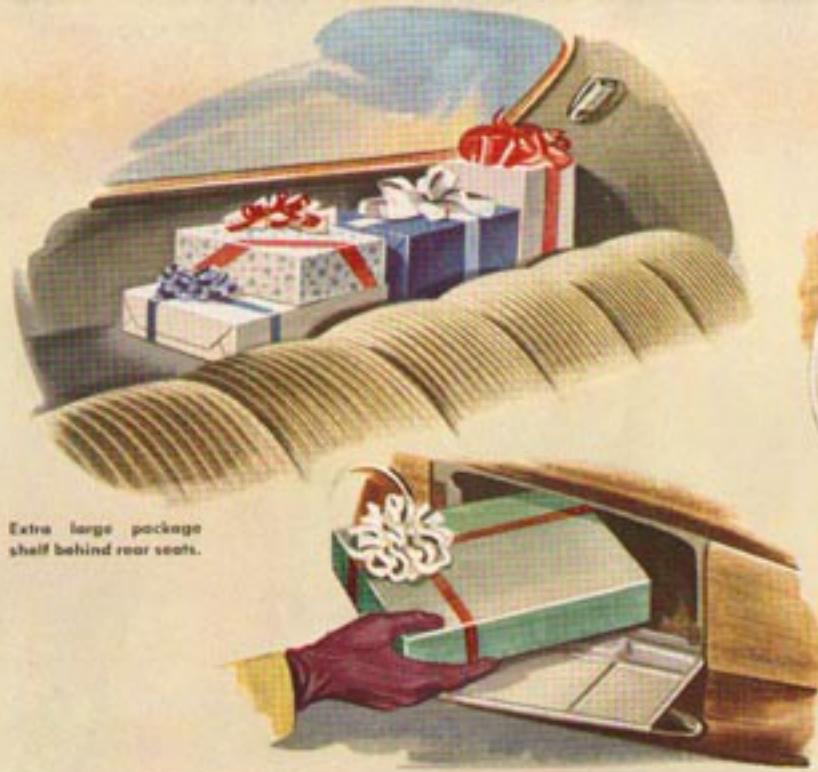

Economy . . . Standard model Hudsons, fully equipped and loaded, have been victorious in National Economy Runs, made at normal driving speeds and under normal driving conditions. The economy competition was based on consumption of both gasoline and oil.

Endurance . . . Here's stamina for you . . . twenty thousand miles in less than twelve days . . . average speed of over 70 miles per hour! A stock-car record . . . made with a Hudson car taken right from the factory assembly line with no previous preparation! This is typical of the endurance built into every Hudson.

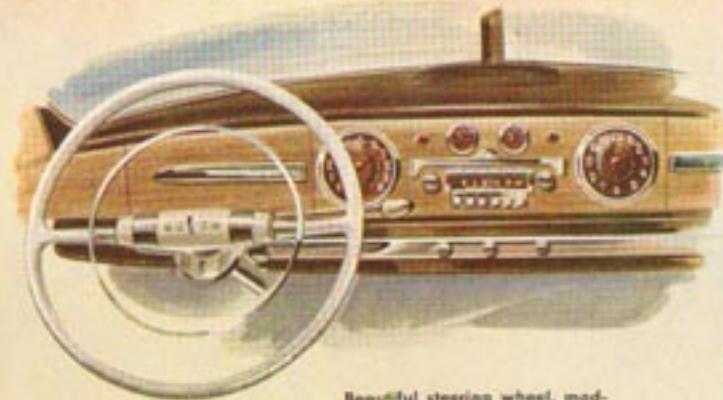

*Complete copies of Hudson official records are available at any Hudson dealer's.

Recessed window and door controls, ash receivers and arm rests.

Extra large package shelf behind rear seats.

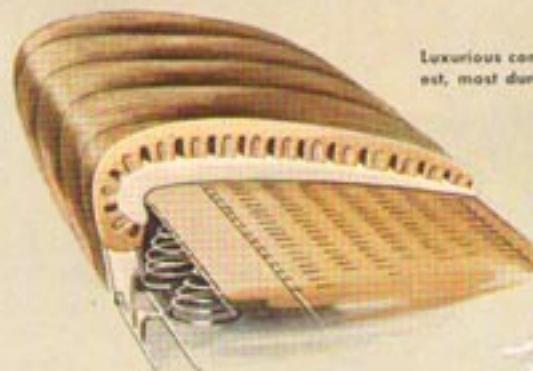

Beautiful steering wheel, modernly styled instrument panel.

Big-capacity parcel locker at right in instrument panel.

All yours, but only in Hudson

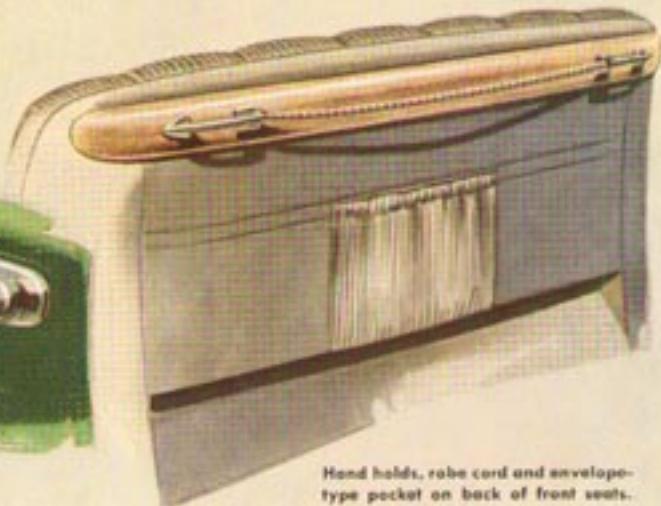

Courtesy light for easy entrance. Lights automatically as door opens and you step down into the new Hudson.

Luxurious comfort with Airfoam, softest, most durable cushioning known.

Non-rotating, trigger release door handle.

Hand holds, robe cord and envelope-type pocket on back of front seats.

And here you get all the facts

CAR SPECIFICATIONS

GENERAL SPECIFICATIONS

GENERATOR—Extra-capacity, ventilated-type with full voltage regulation on all models.

STARTER—Finger-touch button on instrument panel. New anchor plate type Bendix drive.

FUEL SYSTEM—20-gallon gasoline tank. Large, constant-pressure fuel pump.

COOLING SYSTEM—Cellular-tubular radiator with centrifugal, six-blade pressure pump . . . thermostat on all models . . . temperature indicator on dash. Fan has aerodynamically positioned blades.

HANDY SHIFT—Standard on all models. Simplified linkage to transmission. Hudson Drive-Master optional at extra cost.

CLUTCH—Balanced, 10" diameter; fluid-cushioned, triple-sealed, single-plate type with heat-treated cork inserts.

BATTERY—Heavy duty 17-plate, 120 ampere-hour. High plate area.

TRANSMISSION—Synchronized Silent Mesh, blocker-type, three speeds forward, one reverse. Helical, silent gears.

UNIVERSALS—Three lubricated needle-bearing uni-versals with 2" tubular propeller shaft.

SPRINGS—(Front) Independent Suspension with coil springs of Silico Manganese steel and direct-acting, high volume, low pressure, hydraulic shock absorbers both front and rear. (Rear) Semi-elliptic, metal covered springs "splayed" for transverse stability; U-type, self-adjusting rear shocker with rubber dipt seal. Front

of rear springs rubber mounted. Rear and front stabilizers control lateral car movements.

REAR AXLE—Hypoid, semi-floating, nickel-molybdenum gears and nickel-chrome-molybdenum axle shafts. Heavy lamp-type housing. Standard ratio, 4-1/10 to 1 on all models; optional ratios, 4-3/9 to 1 or 4-5/10 to 1. With Overdrive, standard ratio is 4-5/9 to 1, with optional ratios of 4-1/10 to 1 or 4-5/10 to 1. Drive-Master 4-1/10 to 1.

TRIPLE-SAFE BRAKES—Finest hydraulics with reserve mechanical system operating from same brake pedal if ever needed. Finger-tip release parking brake.

WHEELBASE—All models, 124"; over-all length, 207 1/2".

STEERING—Center-Point Steering, provides stability at all speeds on all road surfaces, with short turning radius. Improved worm and roller type gear; 20.4 to 1 on all models.

WHEELS—Steel, balanced, drop-center type. New wide base rim for 13" diameter Super-Cushion tires.

TIRES—High volume, low pressure Super-Cushion Tires. Size 18 x 7.10 standard on all models. Optional at extra cost, 18 x 7.40.

VENTILATION—Large roof ventilator with built-in rain separator unit and insect screen. Draft-free front window ventilation. Hudson Weather-Control for year-round comfort, optional at extra cost.

WINDSHIELD—Extra wide, deep curved design for increased vision, reduced reflection.

LIGHTS—Headlamps: "Sealed Beam" type, incorporating lens, reflector and filaments in a permanently

sealed unit. Toe switch for driving or passing beam . . . bright beam indicator on instrument panel. Front parking lights on all models. Directional signals, front and rear, operated by lever at steering wheel, optional on all models at extra cost. Front dome lamp, all models. Courtesy light for all doors, and two rear compartment and dome lamps standard on Commodore models.

EQUIPMENT—Large parcel compartment with lock . . . twin contour-following vacuum windshield wipers . . . rear vision mirror . . . gas-level gauge . . . twin air horns. Teleflash signals for oil pressure and generator charge indicator . . . water temperature gauge . . . windshield defroster vents . . . automatic ejection cigarette lighter standard on Commodore . . . Cushion-Action door latches . . . thiefproof locks . . . non-rotating outside door handles with trigger-operated latch release . . . arm rests at ends of all seats . . . carry-all luggage compartment with provision for spare tire . . . bumper guards on all Commodore models . . . aluminum stuff plates on all models . . . rear compartment carpet, low pile . . . assist straps in Super Series Broughams, Sedans and both Super and Commodore 6-passenger Club Coupes . . . metal hand rails on back of front seat in Commodore Sedans . . . windshield reveal moulding . . . rear window reveal moulding on Commodore models . . . ash receivers . . . envelope-type pocket in front seat-back of Sedans only . . . rear compartment door ornament.

NOTE: The Hudson Motor Car Company reserves the right to make any changes or improvements on its products without incurring any liability or obligations whatsoever, and without being required to make any corresponding changes or improvements on products theretofore manufactured or sold.

Commodore Series Upholstery

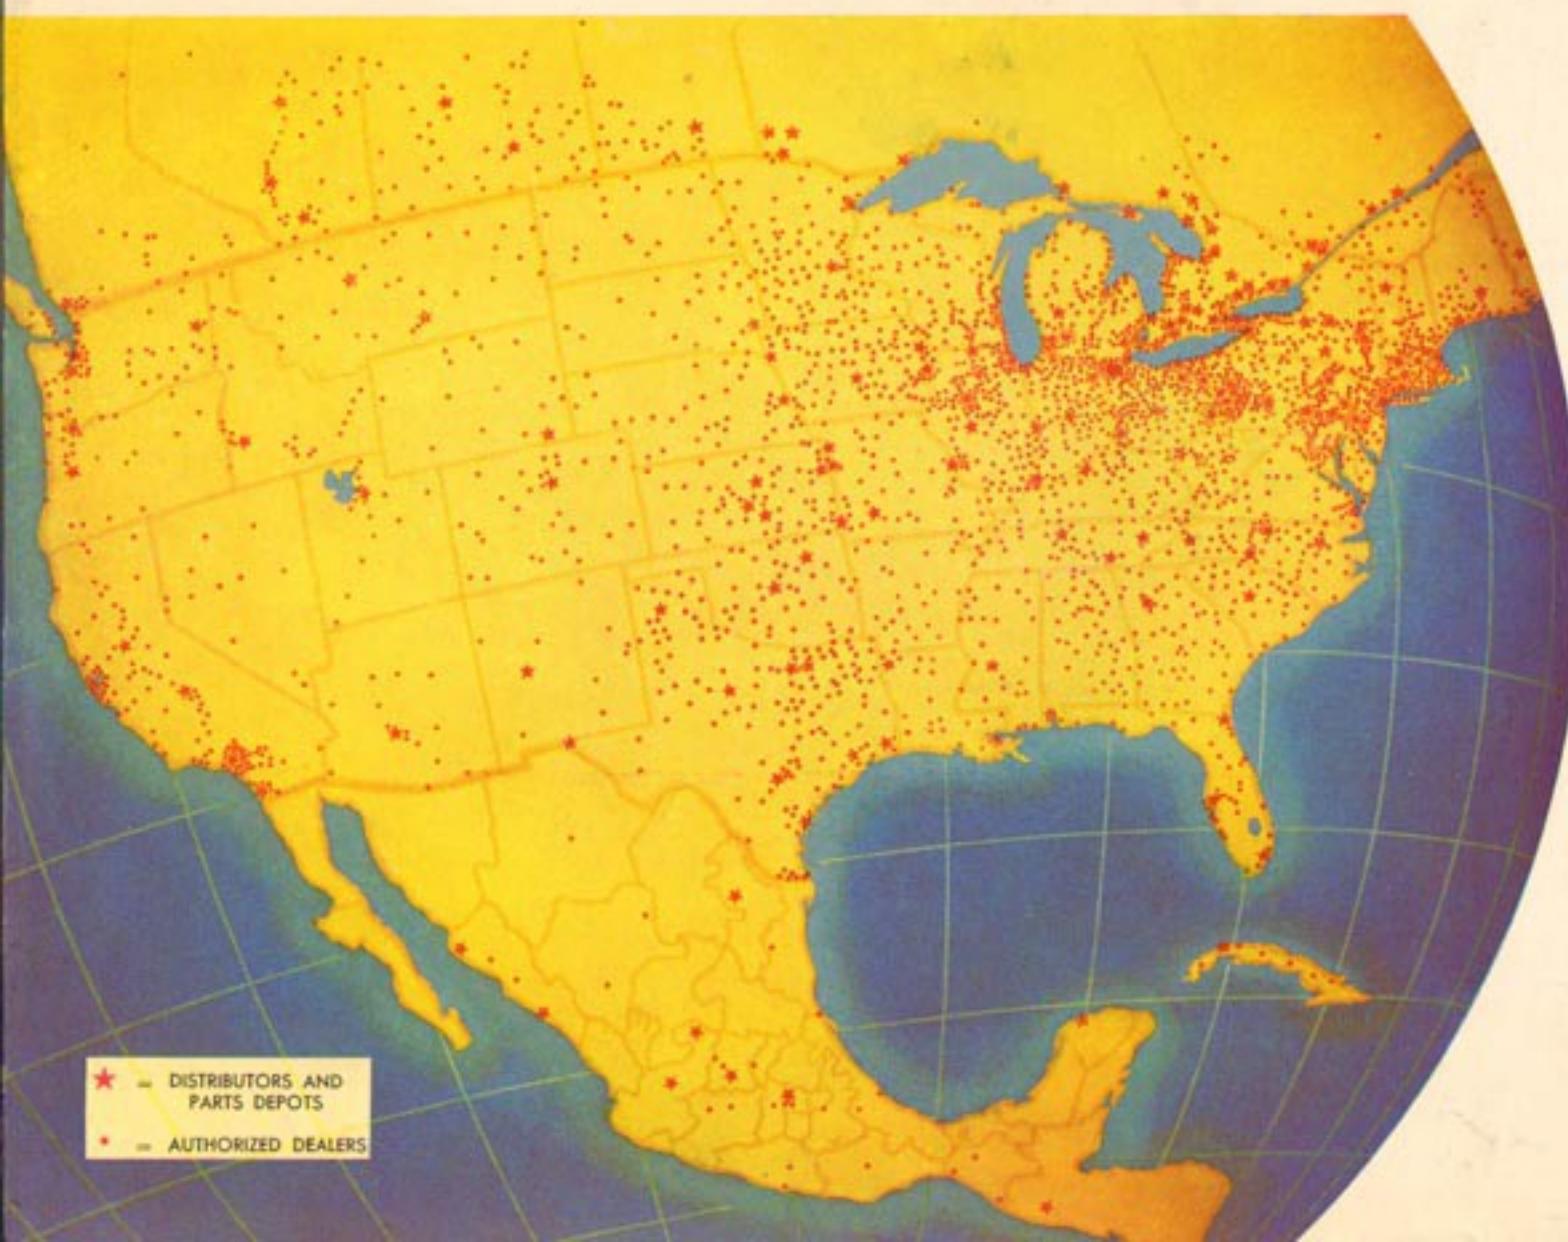

Your choice of tan with green stripes or gray with blue stripes in Broadcloth with bare-mounting sidewall covering.

Super Series Upholstery

Gray Striped Bedford Cord with harmonizing sidewall cloth.

A friendly Hudson dealer to serve you ... wherever you go

Travel wherever you wish on the North American Continent, or to the far ends of the earth, or cruise your neighborhood, you're never far from the red, blue and white sign that identifies more than 3,000 authorized Hudson dealer and distributor service establishments.

And wherever you meet them, you'll find Hudson dealers and distributors are well established, thorough-going business men with reputations for efficiency.

Every Hudson dealer maintains a service department that is modernly equipped, and provided with a well-balanced stock of genuine Hudson parts. He is further supported by 166 strategically located, distributor-operated Parts Depots.

Trained service men are ready to help you wherever you see this sign. They are especially skilled in the kind of preventive maintenance that keeps your car new long after "delivery" day. With a Hudson, you need mighty little service, but what little you need, is mighty easy to get!
